Continuation Sheet (PTO-303)

Application No.

11. Applicant has not claimed a non-obvious invention over the prior art. His arguments fail to demonstrate the patentability of the claimed invention.

Applicant's amended claim 27 states a temperature of about 1000 degrees Celsius. Applicant argues that this temperature is not obvious over the prior art which teaches a preferable temperature of 871 degrees Celsius. Applicant's argument is without merit because the prior art does not teach a maximum of 871 degrees, only a preferable temperature of 871 degrees. Applicant has not established that the prior art teaches away from the oxidant being heated prior to reforming (which can be at any stage prior to reforming) to a temperature of about 1000 degrees C, as claimed. Further, applicant claims "about 1000 degrees C" and in the specification discloses a range of between 871 and 1100 degrees Celsius (pg. 8, lines 6-8). Therefore, applicant cannot make the argument that 871 degrees Celsius is not "about 1000 degrees" as this is the range disclosed in applicant's specification. There is nothing in the specification regarding temperature sensors and their accuracy as argued to define "about 1000 C."
